

Introduction to NoodleTools

John Diefenbaker Senior School
Hanover, Ontario

What is NoodleTools?

⇒ It's an online resource that helps you organize your research and **cite*** it properly in your final project.

**to cite means to give the details of sources you used in your research*

- *it's the only way to prove you have researched your material*
- *you won't be accused of*

plagiarism

What is NoodleTools?

⇒ *Noodle Tools* is an **online resource** that helps you **organize** your research and **cite it** properly in your final project.

⇒ *Noodle Tools* is a subscription service. Our school has paid on your behalf.

⇒ Learning to use these services will help you conduct **quality research** and teach you important skills.

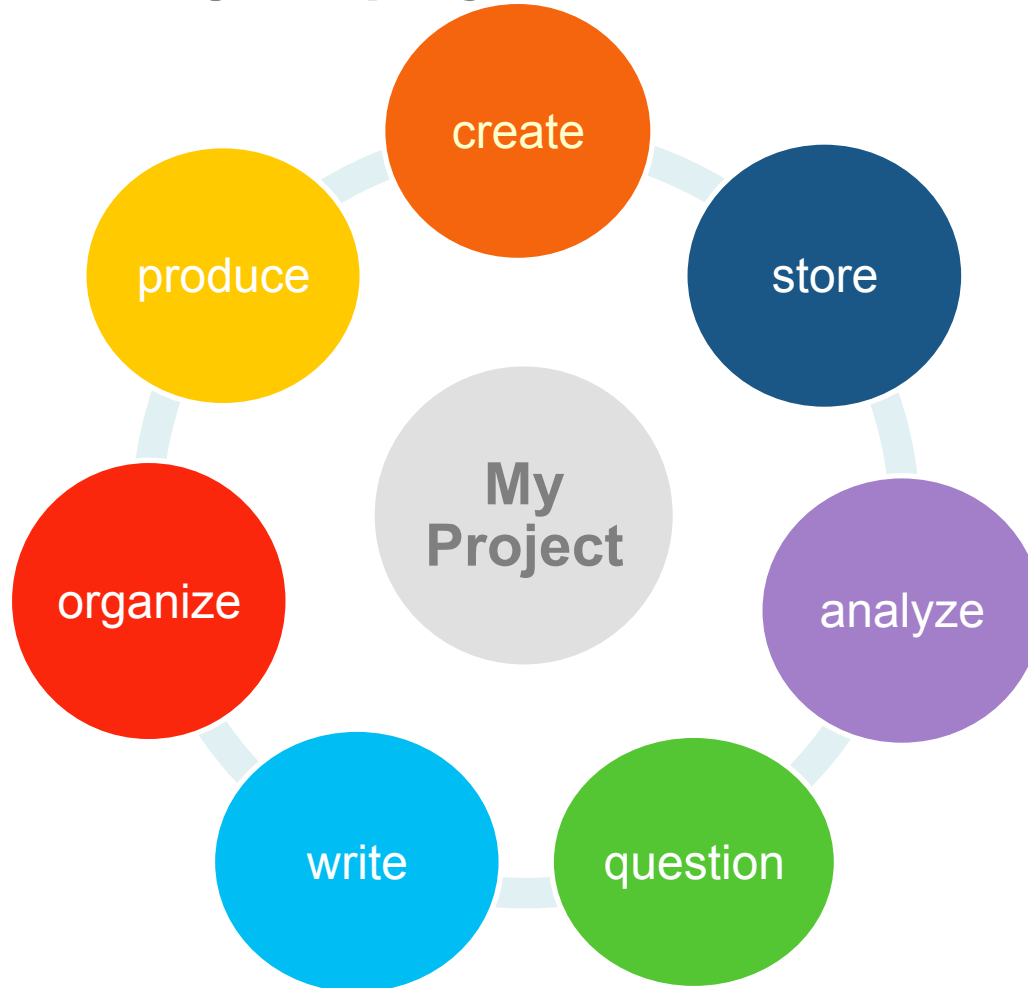

Why NoodleTools?

- Complete your project with a correctly formatted Works Cited page.
- Save copies of web pages to look at later.
- Begin a working bibliography.
- Copy-and-paste relevant quotes onto notecards.
- Paraphrase the author's words.
- Analyze, question, and add your own ideas on your notecards.
- Learn the correct information to include in your parenthetical references.

Why NoodleTools?

Work on your project from start to finish!

See how to make your in-text reference for MLA and APA.

MLA Parenthetical Reference

Example for your source

A parenthetical reference to this **Journal** might look like this:

...the end of your sentence (Ben-Ari 34).

Customize the example:

Page number(s):

Note: This is not the only way to write this parenthetical reference. For example, you might include the author or title of the work in your sentence already (see Rule 2). Please read the additional rules below to be sure you are writing your reference correctly.

What is a parenthetical reference?

A parenthetical reference is a reference within the body of your paper to one of the sources listed in your Works Cited list. It indicates to your reader exactly what you derived from the source, and specifically where they can find it. You need to write a parenthetical, or "in-text" reference, whether you quote the material directly from the source, paraphrase it in your own words, or refer to an idea derived from the material.

What typically goes in an MLA-style parenthetical reference?

The information that you need to include depends on what type of source the material

Title (Main Idea)

Resistance

Direct Quotation

[How do I do this?](#)

Paragraph Font Family Font Size **B** *I* U

Not all amphibian species that are infected with Bd become sick or die. These species like the **American bullfrog** and the **African clawed frog** are said to be "resistant" to chytridiomycosis. Resistant species are a major concern because they are **carriers of Bd** (like a "Typhoid Mary") that can move the fungus to new locations and expose new populations of amphibians that are "susceptible" or more likely to become sick with lethal chytridiomycosis.

Some of the mechanisms that could explain species resistance to chytridiomycosis are:

The presence on the **skin of specific types of symbiotic bacteria** that discourage the growth of Bd (Harris et al., 2009 a and b) Amphibians or amphibian populations that normally have **large numbers of these bacteria in the skin might be more resistant** to developing chytridiomycosis.

The **production by the poison glands in amphibian skin of chemicals called "antimicrobial peptides"** that discourage the growth of Bd. Specific types, combinations or amounts of antimicrobial peptides might help some species to be more resistant to chytridiomycosis.

Some amphibian species or populations may have **genetic resistance** to the development of chytridiomycosis by **mechanisms that are not yet understood**.

Environmental differences between populations such as **temperature, humidity or water flow patterns**. For instance, some of the most important amphibian population declines associated with chytridiomycosis have occurred at high elevation locations that have a **cool temperature range (< 25C or 77F) that is most optimal for the growth of Bd**.

Differences in virulence between different types or "strains" of the Bd fungus. The term virulence refers to the ability of the fungus to cause disease in amphibians. A type of Bd that is **"highly virulent" easily makes amphibians sick**, but another type

My Ideas

[How do I do this?](#)

Paragraph Font Family Font Size **B** *I* U

Do resistant frogs come from warm climates?
 Could at-risk frogs adapt to warmer climates?
 How does global warming affect endangered frogs?
 Check to see if the American Bullfrog comes from a warm climate.
 Find the Harris references.

Paraphrase or Summary

Paragraph Font Family Font Size

Resistant species are the carriers:

- American Bullfrog
- African clawed frog

What could contribute to resistance?

- skin bacteria
- glands produce "antimicrobial peptides"
- genetic make-up
- warm climate
- different strains of Bd
